

Deutsche Glasfaser FttH projects for VIB Netwerken

Since June 2017 LGCE has been cooperating with the Dutch company VIB Netwerken on the roll-out of the Fiber To the Home projects for Deutsche Glasfaser.

Our cooperation with VIB started with the supply of the LGCE Fiber to the Home System for the build of the 950 homes FttH network in Holthausen und Biene in Germany. As main contractor VIB takes care of turnkey delivery of these projects, including Engineering, Licenses, Project Management, Installation, testing and delivery.

LGCE supported VIB from the beginning with the development of installation procedures, product training, warehousing and stock management, deliveries based on the project planning of VIB and registration and declaration of materials at Deutsche Glasfaser.

After the first project VIB and LGCE continued their cooperation for further projects in and around Meppen. VIB has grown to be one of the most successful Installation Companies who are working on the FttH networks for Deutsche Glasfaser and other project owners. Some of the VIB strongholds are: Project Management and Installation in and around the customer premises.

For more information see: www.vib-netwerken.de

As part of the successful cooperation VIB and LGCE share their information on project-, production- and delivery planning on a continuous basis. In this way LGCE can provide the highest delivery reliability in the most efficient way at the numerous project locations in Germany. Also, with help of VIB, LGCE could further improve their products to reduce installation cost and increase installation speed and flexibility.

We thank VIB Netwerken for the cooperation and look forward to further expand our cooperation and business opportunities in the future.

Luit Huisman, Commercieel Directeur VIB Netwerke
